1.A retail chain is planning to open new stores in several regions. Your role is to analyze the chain's market trends and consumer demographics. In this context, what is the importance of data-driven decision-making?

   ⚪ It is a regulatory requirement in certain industries.

   ⚪ It is mainly focused on enhancing customer satisfaction through personalized services.

   ⦿ It involves using insights from data to guide strategic decisions.

✓Correct
Correct! The significance of data-driven decision-making lies in utilizing insights derived from data to inform and guide strategic business decisions, making them more evidence-based and potentially more effective.

1 / 1 point

2.What is one of the primary functions of structured query language (SQL) in managing databases?

   ⚪ To index unstructured data for quicker access.

   ⦿ To facilitate managing and querying structured data in tables.

   ⚪ To create and manage the data visualization processes.

✓Correct
Correct! SQL is designed to efficiently manage and query structured data using tables, rows, and columns for maximum efficiency.

1 / 1 point

3.What role do parameters play in enhancing dynamic reports within Power BI?

   ⚪ They facilitate the automation of report generation without user intervention.

   ⦿ They enable the customization of reports according to specific user inputs and conditions.

   ⚪ They standardize reports to comply with fixed reporting standards.

✓Correct
Correct! Parameters are essential in dynamic reports for customizing the content based on user-defined conditions, allowing for a more tailored analytical experience.

1 / 1 point

4.Adventure Works has tasked you with setting up Personal workspaces for the sales team. What is the primary purpose of Personal workspaces in Power BI?

   ⦿ To work on projects privately and maintain control.

   ⚪ To allow for individual customization of data visualizations.

   ⚪ To provide a space for testing new reports before sharing.

✓Correct

1 / 1 point

Correct! Personal workspaces in Power BI are designed for individual use. They allow users to work on projects privately and with full control over their data assets.

5. Which of the following features in Power BI service workspace settings help to enhance collaboration and communication among team members? Select all that apply. 0 / 1 point

☑ Contact list

⊘ Correct
Correct! Creating and managing a Contact list ensures team members are notified of issues, which is a key part of maintaining communication within the team.

☑ Azure connection

⊗ This should not be selected
Not quite! Please review the *Workspace settings*↗ reading.

☑ Premium tab

⊗ This should not be selected
Not quite! Please review the *Workspace settings*↗ reading.

☑ Workspace OneDrive

⊘ Correct
Correct! Configuring Workspace OneDrive to integrate a SharePoint document library allows for shared access among users, facilitating collaboration.

6. Your team is using Power BI to analyze client data and generate insights. Which tabs in the Power BI service workspace settings must the team use to manage data storage and capacity directly? Select all that apply. 0 / 1 point

☑ System storage tab

⊘ Correct
Correct! The System storage tab allows you to view and manage how much storage space your workspace uses, helping to prevent it from reaching maximum capacity.

☑ About tab

⊗ This should not be selected
Not quite! Please review the *Workspace settings*↗ reading.

☑ Azure connection tab

⊗ This should not be selected
Not quite! Please review the *Workspace settings*↗ reading.

☑ Premium tab

⊘ Correct

Correct! The Premium tab is where you can access options to upgrade your Power BI license, which can increase your workspace's storage capacity.

7. Your team is exploring the benefits of packaging dashboards, reports, and datasets into an App in Power BI. They ask why this capability is relevant to their retail operations. How do you respond? 1 / 1 point

- ◉ It can be used to streamline the sharing and distribution of Power BI content.

- ○ It can be used to visually enhance the graphic design of reports.

- ○ It can be used to significantly increase the data processing speed of Power BI.

⊘Correct
Correct! Apps in Power BI service allow for streamlined sharing and distribution of Power BI content, making it easier for users to access and use the data.

8. What are the benefits of workspace audiences in Power BI workspace apps? Select all that apply. 0 / 1 point

- ☑ Enhanced user experience by organizing content in a guided manner.

⊘Correct
Correct! By organizing content in a manner that guides users, workspace audiences enrich the data storytelling within the app and enhance the user experience.

- ☑ Personalization of content sharing based on roles or departments.

⊘Correct
Correct! By allowing content to be personalized according to the roles or departments, workspace audiences ensure that users only see the data that is relevant to them.

- ☑ Automatic customization of report visuals based on user interaction.

⊗This should not be selected
Not quite! Please review the *Managing audiences in workspace apps*⤤ reading.

- ☑ Simplified content management through structured organization.

⊘Correct
Correct! Workspace audiences provide a structured way to organize content, simplifying content management and enabling administrators to easily control report visibility.

9. What benefit does the Workspace Metrics Preview Feature in Power BI primarily provide? 1 / 1 point

- ○ It offers a detailed analysis of specific user interactions.

- ◉ It offers broad insights into workspace and report usage.

- ○ It offers enhanced security measures for sensitive data.

⊘Correct
Correct! It expands monitoring capabilities to provide comprehensive insights into report performance.

10.What is the benefit of setting a scheduled refresh for a dataset in Power BI?　　　　　　　　　1 / 1 point

○ To prevent any unauthorized data from being added to the dataset.

⦿ To ensure the dataset is updated at specified intervals.

○ To reduce the complexity of the dataset and improve usability.

⊘Correct
Correct! Scheduled refreshes are set routines to update datasets so that the data stays current.

11.In your role as the lead data analyst for a cutting-edge tech startup, you're tasked with educating your team about　　1 / 1 point
Power BI gateways. During a training session, you delve into the primary function of the on-premises data gateway in
Power BI. What is this function?

○ To provide enhanced security and analytics for individual user data

⦿ To allow users to share and refresh data across various Microsoft services

○ To minimize the costs of data management within a virtual network

⊘Correct
Correct! The on-premises data gateway enables multiple users to manage and refresh shared datasets across
different Microsoft services, facilitating versatile data interaction within an organization.

12.Adventure Works senior management is eager to unlock the potential of Power BI. They ask you what specific types of　　1 / 1 point
Power BI content is eligible for endorsement through promotion or certification. How do you respond?

○ User-generated insights and custom visuals.

○ Workspaces and shared dashboards.

⦿ Datasets, dataflows, reports, and apps.

⊘Correct
Correct! These are the specific content types within Power BI that can be officially endorsed through promotion or
certification.

13.What are the benefits of a structured development lifecycle in Power BI's Deployment Pipelines? Select all that apply.　　0 / 1 point

☑ Efficiency and Control

⊘Correct
Correct! Deployment pipelines provide a streamlined process for managing changes, which leads to better
control over the development process.

☑ Data Integrity

⊘ Correct
Correct! A structured development lifecycle allows for comprehensive testing, ensuring that data remains accurate and reliable.

☑ Data Safety

⊘ Correct
Correct! A structured lifecycle ensures that unvetted changes do not affect production data.

☑ Increased Deployment Speed

⊗ This should not be selected
Not quite! Please review the *Development lifecycles*⬀ video.

14. What is the purpose of the Deployment history feature in Power BI Deployment Pipelines?   1 / 1 point

◉ To keep track of changes and ensure data integrity.

◯ To automate the data deployment process.

◯ To provide real-time analytics and reduce the size of the datasets.

⊘ Correct
Correct! The deployment history feature helps log all changes made, who made them, and their status, thus ensuring data integrity.

15. Which roles are key in utilizing the functionalities of Lineage View and Impact Analysis in Power BI? Select all that apply.   0 / 1 point

☑ Viewer

⊗ This should not be selected
Not quite! Please review the *Impact analysis and lineage*⬀ video.

☑ External Guest

⊗ This should not be selected
Not quite! Please review the *Impact analysis and lineage*⬀ video.

☑ Admin

⊘ Correct
Correct! An admin has the necessary permissions to fully utilize Lineage View and Impact Analysis's functionalities.

☑ Contributor

⊘Correct
Correct! A contributor can access Lineage View and Impact Analysis to manage data within their scope of permissions.

16. What is the primary benefit of enabling query caching in Power BI?   1 / 1 point

⦿ It enhances performance by reducing load times.

◯ It increases the number of reports that can be stored.

◯ It allows for the creation of more complex queries.

⊘Correct
Correct! Query caching significantly reduces the time required to load frequently accessed reports. This enhances performance.

17. What is the purpose of implementing row-level security (RLS)?   1 / 1 point

◯ For providing a balance between transparency and security.

◯ For encrypting and verifying data to safeguard it during transmission.

⦿ To control the visibility of sensitive data based on the user's role or identity.

⊘Correct
Correct! RLS filters which data rows are visible to users (depending on their role or identity) to protect sensitive information.

18. What is the appropriate label in Power BI to assign to monthly newsletters covering company events and other internal news?   1 / 1 point

◯ Highly Confidential

◯ Public

⦿ General

⊘Correct
Correct! The General label is used for information intended for the broader internal audience without specific sensitivities.

19. Which permission type in Power BI signifies the ability to modify datasets?   1 / 1 point

◯ Read

◯ Build

○ Write

✓ Correct
Correct! The Write permission grants the ability to alter the dataset, including making updates and additions.

20.What are the benefits of using sharing links when distributing Power BI reports externally? Select all that apply.   0 / 1 point

☑ Links can use expiration dates to limit long-term access.

✓ Correct
Correct! Setting expiration dates on links helps to control access over time and enhances security.

☑ Links can mandate authentication for external users, ensuring secure access.

✓ Correct
Correct! Requiring authentication for access is an effective security measure.

☑ Links can automatically grant build and edit permissions to all recipients.

✕ This should not be selected
Not quite! Please review the *Sharing outside your organization*⧉ reading.

☑ Links can be limited to specific users, reducing the risk of unauthorized access.

✓ Correct
Correct! Limiting link access to specific users is a key security measure to prevent unauthorized use.

21.What is a potential drawback when using dynamic row-level security in Power BI?   1 / 1 point

○ It reduces data visualization options.

○ It increases data storage requirements.

◉ It impacts performance due to real-time filtering

✓ Correct
Correct! A potential issue with dynamic RLS is the performance impact due to the need for real-time data filtering, especially with large datasets.

22.In which scenario would Dynamic RLS be more advantageous than Static RLS in Power BI?   1 / 1 point

○ When data access needs to be manually updated frequently.

○ When user roles and data access needs are consistent and unchanging.

◉ When roles require flexibility and frequent data access changes.

⊘Correct

Correct! Dynamic RLS is advantageous in scenarios where roles require flexibility and frequent changes in data access, as it automatically adjusts access based on user roles and attributes.

23. What happens when users try accessing data outside their assigned region in Power BI?   1 / 1 point

⦿ They see blank visuals.

◯ Their access level is automatically upgraded.

◯ The system logs them out.

⊘Correct

Correct! Due to row-level security settings, users see blank visuals when attempting to access data outside their assigned region.

24. What is the primary purpose of the USERPRINCIPALNAME function in Dynamic Row Level Security in Power BI?   1 / 1 point

⦿ To retrieve a user's email address and filter data.

◯ To manage the roles and permissions of users.

◯ To define user roles within the Power BI environment.

⊘Correct

Correct! The USERPRINCIPALNAME function is used to fetch the user's email address, which is then used to dynamically filter the data dynamically, ensuring users can only access data relevant to them.

25. How do subscriptions in Power BI enhance team collaboration?   1 / 1 point

◯ By enabling real-time editing of reports.

⦿ By establishing uniformity in information.

◯ By providing individualized report views.

⊘Correct

Correct! Subscriptions enhance collaboration by ensuring all team members work from the same version of each report.

26. How do data alerts in Power BI contribute to proactive problem-solving and decision-making? Select all that apply.   0 / 1 point

☑ By identifying cost-saving opportunities.

⊗This should not be selected

Not quite! Please review the *Configuring data alerts*↗ video.

☑ By providing early warnings about potential issues.

✓ Correct
Correct! Early warnings about key metric deviations allow for proactive measures, a major advantage of data alerts.

☑ By suggesting specific solutions to data-related problems.

✕ This should not be selected
Not quite! Please review the *Configuring data alerts*↗ video.

☑ By enabling quick intervention before problems escalate.

✓ Correct
Correct! Data alerts enable quick interventions, preventing potential issues from developing into larger problems.

27. A team member requires the ability to update and delete workspaces in Power BI. What role should you assign this team member?   1 / 1 point

○ Contributor

◉ Admin

○ Member

✓ Correct
Correct! Admins oversee the workspace, with full control over its assets and members, as they can update and delete a workspace.

28. You want to analyze your report's usage metrics to discover how long the content takes to load. Which report page should you access to view the loading times?   1 / 1 point

◉ The Report performance page.

○ The Report usage page.

○ The FAQ page.

✓ Correct
Correct! The report performance page analyzes the loading times of report pages in a workspace.

29. True or False: Granting build permissions in Power BI to other users lets them modify the foundational data of your original report to craft new insights.   0 / 1 point

◉ True

○ False

(×)Incorrect

Not quite! Please review the *Configuring dataset permissions*↗ video.

30. True or False: The General sensitivity label in Power BI is primarily for data targeted at external stakeholders containing specific sensitivities.

1 / 1 point

○ True

⦿ False

(✓)Correct

Correct! The General label is for information intended for a wide internal audience. It's meant for all employees but isn't necessarily for external stakeholders.

1. A retail chain is planning to open new stores in several regions. Your role is to analyze the chain's market trends and consumer demographics. In this context, what is the importance of data-driven decision-making?

1 / 1 point

○ It is a regulatory requirement in certain industries.

○ It is mainly focused on enhancing customer satisfaction through personalized services.

◉ It involves using insights from data to guide strategic decisions.

✓ Correct
Correct! The significance of data-driven decision-making lies in utilizing insights derived from data to inform and guide strategic business decisions, making them more evidence-based and potentially more effective.

2. What is one of the primary functions of structured query language (SQL) in managing databases?

1 / 1 point

○ To create and manage the data visualization processes.

◉ To facilitate managing and querying structured data in tables.

○ To index unstructured data for quicker access.

✓ Correct
Correct! SQL is designed to efficiently manage and query structured data using tables, rows, and columns for maximum efficiency.

3. What is the primary benefit of using dynamic reports in Power BI?

1 / 1 point

○ To enable historical data comparisons without real-time updates.

○ To reduce the use of numerical data in reports.

◉ To avoid generating multiple static reports for different needs.

✓ Correct
Correct! Dynamic reports allow organizations to use one report for various purposes. This saves time and optimizes resources, leading to more efficient reporting practices.

4. You're advising a new team at Adventure Works responsible for managing Power BI workspaces. The team is creating new workspaces for different departments. Why must the team ensure its naming conventions are clear and consistent in its Power BI Workspaces?

1 / 1 point

◉ To aid in easy retrieval and benefit all users, especially in shared workspaces.

○ To prevent unauthorized access to sensitive information.

○ To reduce the time required for new team members to understand the workspace structure.

5. You've recently been assigned to lead a team of analysts at a fast-growing tech company. Your team is eager to leverage the power of Power BI for their data analysis tasks. However, they are uncertain how to connect Power BI to their company's Microsoft 365 group. Which feature allows you to connect a Microsoft 365 group with a SharePoint document library directly to a Power BI workspace?

1 / 1 point

○ System storage

⦿ Workspace OneDrive

○ Azure connection

6. Which tab in the Power BI workspace settings can you use to access and potentially upgrade your Power BI license?

1 / 1 point

○ About tab

⦿ Premium tab

○ System storage tab

7. Your team is exploring the advantages of the Create app feature in Power BI to justify its implementation within the organization. What is the primary benefit of using the Create app feature in Power BI?

1 / 1 point

⦿ It offers streamlined sharing and distribution of content.

○ B: It offers enhanced data entry capabilities.

○ It offers advanced data analysis tools.

8. What are the benefits of workspace audiences in Power BI workspace apps? Select all that apply.

1 / 1 point

☐ Automatic customization of report visuals based on user interaction.

☑ Personalization of content sharing based on roles or departments.

⊘ Correct
Correct! By allowing content to be personalized according to the roles or departments, workspace audiences ensure that users only see the data that is relevant to them.

☑ Enhanced user experience by organizing content in a guided manner.

⊘ Correct
Correct! By organizing content in a manner that guides users, workspace audiences enrich the data storytelling within the app and enhance the user experience.

☑ Simplified content management through structured organization.

⊘ Correct
Correct! Workspace audiences provide a structured way to organize content, simplifying content management and enabling administrators to easily control report visibility.

9. Why is monitoring workspace and report usage in Power BI important? Select all that apply.　　　　1 / 1 point

☑ To improve the performance and effectiveness of reports and dashboards.

⊘ Correct
Correct! Monitoring helps identify which reports perform well and which require optimization by providing a clear picture of usage patterns.

☑ To make informed decisions on optimizations and resource allocation.

⊘ Correct
Correct! By tracking how reports and dashboards are accessed and used, organizations can gather valuable insights that inform how to allocate resources more efficiently.

☐ To reduce the cost of Power BI licenses associated with reporting.

☑ To inform the alignment of data solutions with organizational strategies and user needs.

⊘ Correct
Correct! Monitoring usage provides data analysts with the evidence needed to ensure that their work is relevant to the strategic goals of the organization and the preferences of its users.

10. What is the benefit of setting a scheduled refresh for a dataset in Power BI?　　　　1 / 1 point

○ To prevent any unauthorized data from being added to the dataset.

○ To reduce the complexity of the dataset and improve usability.

◉ To ensure the dataset is updated at specified intervals.

⊘ Correct

Correct! Scheduled refreshes are set routines to update datasets so that the data stays current.

11. In your role as the lead data analyst for a cutting-edge tech startup, you're tasked with educating your team about Power BI gateways. During a training session, you delve into the primary function of the on-premises data gateway in Power BI. What is this function?

1 / 1 point

- ⦿ To allow users to share and refresh data across various Microsoft services

- ○ To minimize the costs of data management within a virtual network

- ○ To provide enhanced security and analytics for individual user data

✓ Correct
Correct! The on-premises data gateway enables multiple users to manage and refresh shared datasets across different Microsoft services, facilitating versatile data interaction within an organization.

12. As a data analysis pioneer within a dynamic marketing agency, you're responsible for training new recruits on the latest data tools. In a training session focused on Power BI, one of the recruit asks, "What is the main goal of content promotion in Power BI?" How do you respond?

0 / 1 point

- ○ To highlight valuable content fit for sharing within the organization

- ○ To increase collaborative opportunities within specific teams

- ⦿ To prepare content for the certification review process

✗ Incorrect
Not quite! Please review the *Promote versus certify*↗ reading.

13. What is the purpose of a development environment in Power BI's Deployment Pipelines?

1 / 1 point

- ○ To deploy final reports for end-user consumption.

- ○ To exclude unnecessary stages in the deployment pipeline.

- ⦿ To create and modify Power BI reports without impacting production data.

✓ Correct
Correct! The development environment is where new content is added and existing reports are modified without changing the live production data.

14. What is the purpose of the Deployment history feature in Power BI Deployment Pipelines?

1 / 1 point

- ⦿ To keep track of changes and ensure data integrity.

- ○ To automate the data deployment process.

○ To provide real-time analytics and reduce the size of the datasets.

✓ Correct
Correct! The deployment history feature helps log all changes made, who made them, and their status, thus ensuring data integrity.

15. What is the primary benefit of utilizing Impact Analysis in Power BI?　　　　　　　　　1 / 1 point

○ It serves as the primary data visualization tool, replacing the need for data lineage.

◉ It helps you to understand the consequences of data changes.

○ It automates the data update process across workspaces.

✓ Correct
Correct! Impact Analysis allows users to understand how changes in data affect various workspaces, reports, and dashboards, ensuring informed decision-making.

16. Which mode must be enabled in Power BI Service to apply query caching?　　　　　　　1 / 1 point

○ Live Connection mode

○ DirectQuery mode

◉ Import mode

✓ Correct
Correct! Query caching is exclusive to Import mode and cannot be used with DirectQuery or Live Connection modes.

17. Adventure Works has tasked you with protecting sensitive data. What measures can you take to safeguard the company's sensitive data? Select all that apply.　　　　　　　　　1 / 1 point

☑ Define user roles and permissions to control data distribution.

✓ Correct
Correct! Roles and permissions help distribute data on a need-to-know basis, safeguarding sensitive information.

☑ Apply row-level security to filter data access based on user roles.

✓ Correct
Correct! RLS is a security measure that allows users to see only the data rows they are authorized to view.

☑ Implement authentication and authorization to verify users.

✓ Correct
Correct! Implementing authentication and authorization ensures that only authorized individuals can access sensitive data.

☐ Restrict access to all data regardless of user roles.

18.What are data sensitivity labels used for in Power BI?   1 / 1 point

○ To improve data visualization in reports.

○ To increase data processing speed and automate data entry tasks.

◉ To categorize data and safeguard trust.

⊘Correct
Correct! Data sensitivity labels act like digital tags that show the level of confidentiality data requires and help
handle data responsibly.

19.As the data analyst at Adventure Works, you are responsible for configuring permissions in Power BI to ensure that   0 / 1 point
users can interact with data appropriately. Which of the following permissions in Power BI allow users to interact with
data without altering the underlying datasets? Select all that apply.

☐ Build

☐ Owner

☑ Read

⊘Correct
Correct! The Read permission allows users to view and understand data without changing it.

☐ Write

You didn't select all the correct answers

20.What is the purpose of adjusting External Sharing Settings in the Power BI service?   1 / 1 point

◉ To maintain company security standards while enabling external sharing.

○ To simplify the process of reports publicly without restrictions.

○ To provide external users with the ability to alter sharing settings.

⊘Correct
Correct! Adjusting these settings helps to uphold security protocols during external sharing.

21.How does dynamic row-level security in Power BI benefit growing companies?   1 / 1 point

○ It provides automatic data backup and refreshes.

○ It simplifies complex data calculations.

◉ It ensures compliance with data privacy regulations.

⊘ Correct
Correct! Dynamic RLS helps growing companies comply with data privacy regulations by controlling access based on real-time user roles.

22. Which of the following statements correctly describes the features of Static RLS? Select all that apply.　　　1 / 1 point

☐ It requires regular manual adjustments for day-to-day operations.

☑ It is well-suited for roles with consistent data access needs.

⊘ Correct
Correct! Static RLS is ideal for roles with consistent data access needs, such as HR departments dealing with specific data sets.

☐ It automatically adjusts access permissions based on user roles and attributes.

☑ It involves predefined data access rules that remain fixed unless deliberately modified.

⊘ Correct
Correct! Static RLS in Power BI uses fixed, predefined rules for data access that don't change unless manually updated.

23. What are the expected outcomes when static row-level security is properly configured in Power BI? Select all that apply.　　　1 / 1 point

☑ A user can only access data specified by their role's DAX expression.

⊘ Correct
Correct! The user can only access data defined by the DAX expression in their role.

☐ The data model will automatically update to reflect new security settings.

☑ Other users' access to data will remain unaffected.

⊘ Correct
Correct! Proper configuration ensures that other users' access is not adversely affected unless specifically intended.

☑ A user will see blank visuals if data is outside their role's scope.

⊘ Correct
Correct! Users will encounter blank visuals if they try to access data outside their role's scope.

24. You're tasked with implementing dynamic row-level security in Power BI to enhance data access control at Adventure Works. You must follow the correct procedure for applying filters using DAX expressions. Which actions are involved in　　　1 / 1 point

applying a filter using DAX for dynamic row-level security? Select all that apply.

☐ Assigning the configured role to a specific user group.

☑ Validating the syntax of the DAX expression.

⊘Correct
Correct! Verifying the syntax of the DAX expression is an important step to ensure the accuracy and functionality of the filter.

☑ Selecting the table to apply a filter.

⊘Correct
Correct! Choosing the specific table to apply a filter is a crucial step in the process.

☑ Using the USERPRINCIPALNAME function to filter data.

⊘Correct
Correct! The USERPRINCIPALNAME function dynamically filters data based on the user's email address.

25. How do subscriptions in Power BI enhance team collaboration?   1 / 1 point

◉ By establishing uniformity in information.

◯ By providing individualized report views.

◯ By enabling real-time editing of reports.

⊘Correct
Correct! Subscriptions enhance collaboration by ensuring all team members work from the same version of each report.

26. How do data alerts in Power BI contribute to proactive problem-solving and decision-making? Select all that apply.   1 / 1 point

☑ By enabling quick intervention before problems escalate.

⊘Correct
Correct! Data alerts enable quick interventions, preventing potential issues from developing into larger problems.

☑ By providing early warnings about potential issues.

⊘Correct
Correct! Early warnings about key metric deviations allow for proactive measures, a major advantage of data alerts.

☐ By suggesting specific solutions to data-related problems.

☐ By identifying cost-saving opportunities.

27. What role in Power BI lets users create content and add or remove other users? 0 / 1 point

○ Contributor

○ Member

◉ Admin

⊗Incorrect
Not quite! Please review the *Roles cheatsheet*↗ reading.

28. You want to analyze your report's usage metrics to discover how long the content takes to load. Which report page should you access to view the loading times? 1 / 1 point

◉ The Report performance page.

○ The Report usage page.

○ The FAQ page.

✓Correct
Correct! The report performance page analyzes the loading times of report pages in a workspace.

29. Which of the following statements about Power BI's sharing permissions are true? Select all that apply. 0 / 1 point

☐ Build permissions allow individuals to use shared data to create new reports.

☑ Reshare permissions allow the initial recipient of a report to share it further with others.

✓Correct
Correct! Reshare permissions in Power BI are designed to enhance information sharing. They enable the recipients of a report to share it further with additional stakeholders.

☑ Reshare permissions can dilute the original context of the shared data with each subsequent share.

✓Correct
Correct! The nature of reshare permissions carries an inherent risk as each share increases the chances of the original context becoming distorted or diluted.

☐ Build permissions grant recipients administrative rights over the original report.

You didn't select all the correct answers

30. True or False: The General sensitivity label in Power BI is primarily for data targeted at external stakeholders containing specific sensitivities. 1 / 1 point

○ True

⊙ False

⊘ Correct
Correct! The General label is for information intended for a wide internal audience. It's meant for all employees but isn't necessarily for external stakeholders.
